

Quarterly Report

Care and Protection interactions

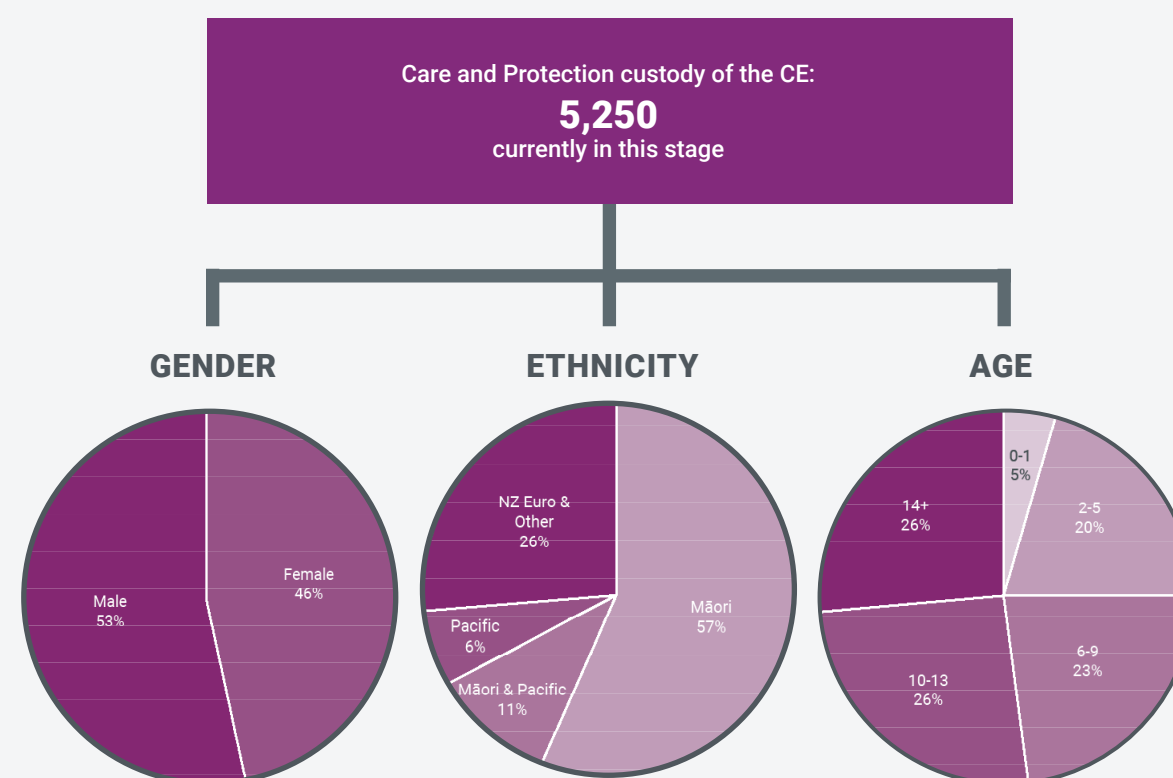

Quarterly Report to 30 June 2021

The top diagram shows the flow of children and young people over the twelve months to 30 June 2021, from reports of concern through to eventual exit from care and protection. This is accompanied by a count of *distinct* children at each interaction point - therefore counting each child only once regardless of how many times they had a given interaction over the twelve month period.

The bottom charts show the current number of children and young people in care as at 30 June 2021, and provides demographic information on them including gender, age, and ethnicity.

Children & young people we are working with as at 30 June 2021

Note: Overall percentages may not always add to 100 percent due to rounding. Care numbers (including entries and exits to care) do not include warrants (s39, s40, s42, s48) as they are generally shorter than five days.

Quarterly Report

Youth Justice interactions

Quarterly Report to 30 June 2021

The top diagram below shows the flow of young people who allegedly offended and were referred to Oranga Tamariki over the twelve months to 30 June 2021. This is accompanied by a count of *distinct* young people at each interaction point (therefore, counting each young person once regardless of how many times they had a given interaction over the twelve month period).

The bottom charts show the number of young people we were working with who were not in custody, and the number in the Youth Justice custody of the chief executive (CE) as at 30 June 2021, and provides further information on their demographic characteristics.

Note: Overall percentages may not add to 100 percent due to rounding. The number of 'additional young people we are working with' and 'Youth Justice custody' as well as the breakdowns of these figures are all rounded so may not add up to the same number. Youth Justice custody of the CE may be overestimated due to delayed recording. Please note the figure can also fluctuate noticeably on a daily basis.

Quarterly Report

Transition Services

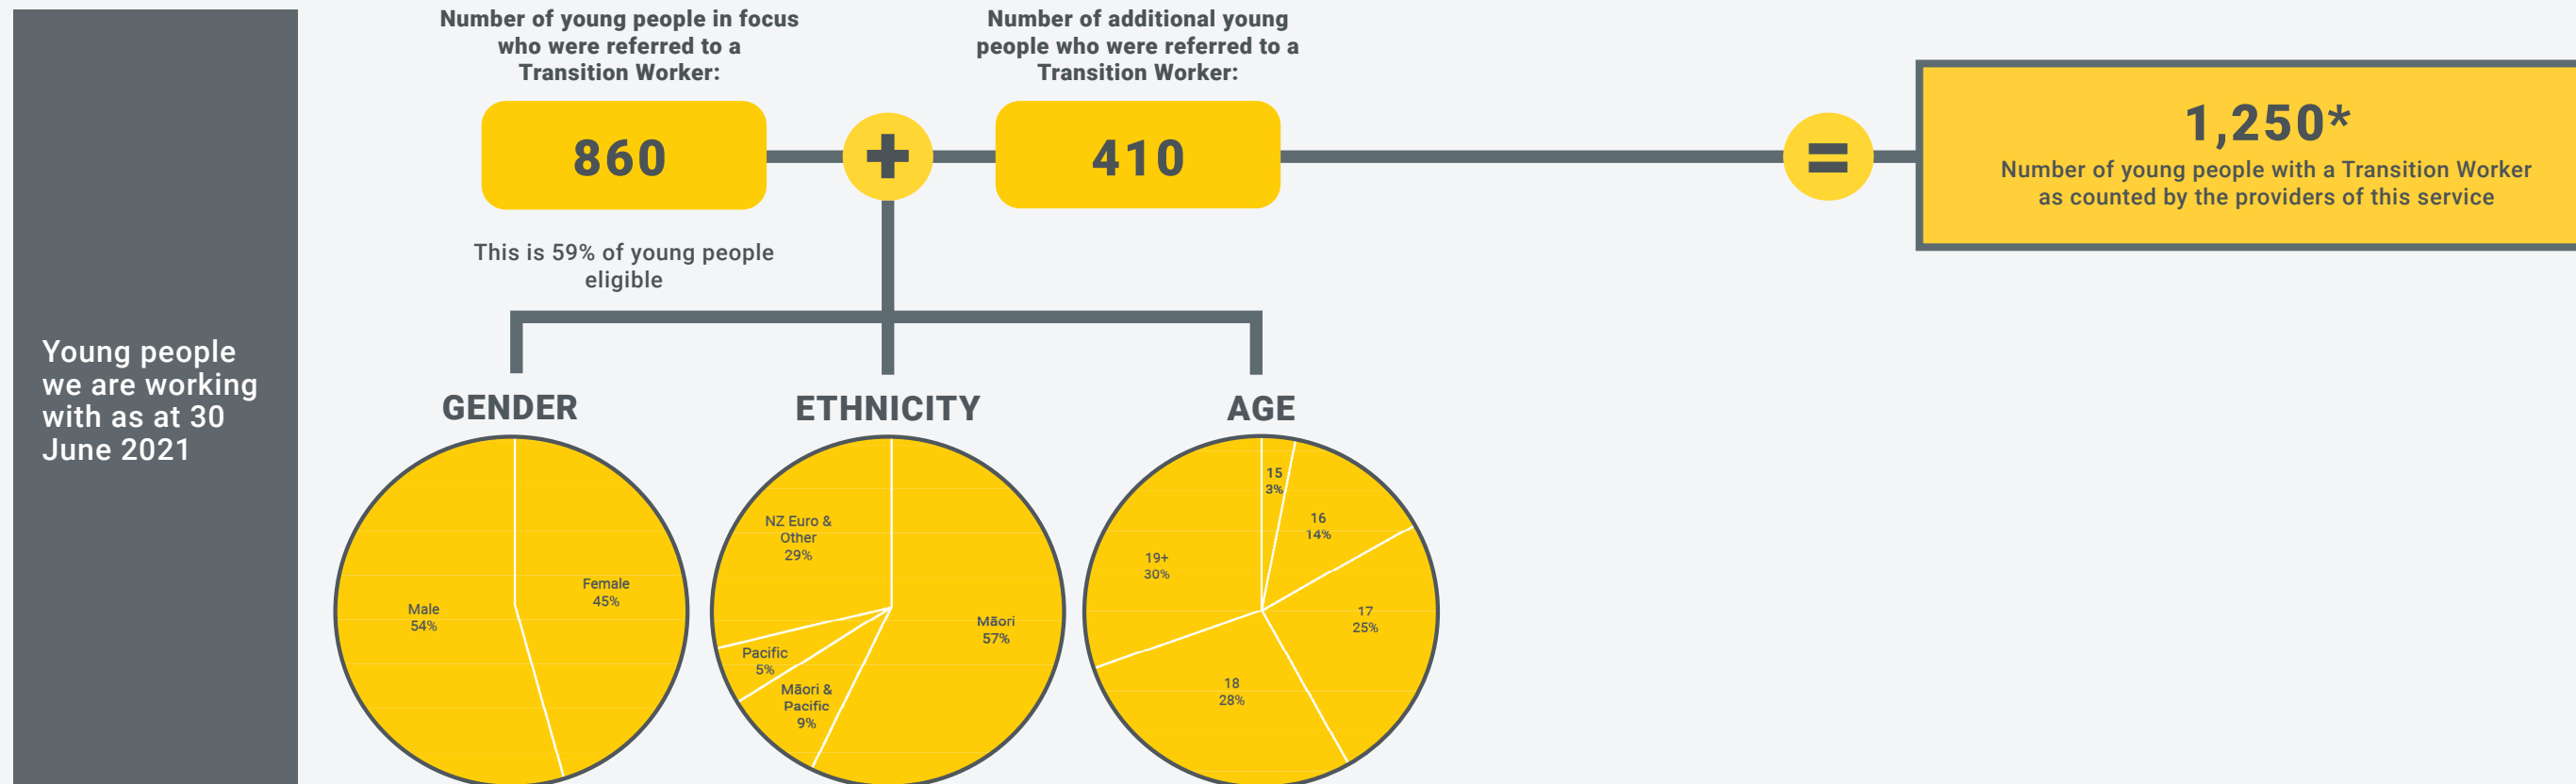

Quarterly Report to 30 June 2021

The charts below show the number of young people who have accessed a transitions service in the twelve months to 30 June 2021. The services shown are:

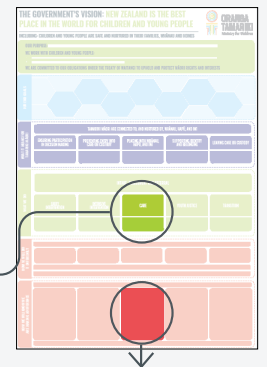

Transition Worker: Young people may have a Transition Worker to walk alongside them and maintain regular contact up to the age of 21. Young people may also have a transition worker to provide in person support via "advice and assistance". This may be beyond the age of 21.

Entitlement to Remain or Return: Young people who elect to will be supported to remain living or return to living with a caregiver between 18 and 21.

Supported Accommodation: Young people may live in supported accommodation that provides a safe and stable living environment.

*Note: The young people referred to and working with a Transition Worker may not add up to the same number due to rounding. Overall percentages of demographic breakdowns may not always add to 100 percent due to rounding. Please note that the Transition Service is under development so visuals and ways of measuring may change in future deliveries.

Note: COVID-19 may have impacted the June, September, and December 2020 quarters. This is due to the Alert Level restrictions first implemented at the end of March 2020.

LOVING PLACEMENTS

Out of home placement type for longer term placements

The number of longer term out of home placements has decreased slightly this quarter. Family/whānau placements decreased but are still the majority of these placements. The number of 'other' placements has increased and accounts for 21 percent of out of home placements. Most 'other' placements are where Oranga Tamariki contract Child and Family Support Services to provide a placement for tamariki or rangatahi.

STABLE PLACEMENTS

Family/whānau placement instability

Almost all (97 percent) of family/whānau placements had the same caregiver at the end of the quarter as they did at the start. There were decreases in both the number of children changing family/whānau caregivers (blue bar) and the number of children leaving family/whānau placements (green bar) in the last quarter.

More children in care are in safe, stable and loving homes

PLACEMENT AVAILABILITY

Placement availability on entry to care

The proportion of family/whānau placement availability on entry to care increased its overall share to 30 percent. 'Other' placements are the most used placement type on entry to care at 53 percent. On average, about 45 percent of these 'other' placements last 3 months or less. The most common 'other' placement is 'regular payment,' which is used to support parents or whānau at the point of entry.

More appropriate care arrangements are available for children

QUALITY OF PLACEMENT MATCHING

Ethnicity match with caregivers

The number of children living in out of home placements has continued to decrease in the latest quarter, however the proportion who have an ethnicity match has remained relatively stable. Of children living with a caregiver, 88 percent are living with family/whānau or with a caregiver of the same ethnicity.

NEEDS ASSESSMENT COMPLETED

Completion status of gateway assessment

The total number of completed assessments has continued to decrease in line with the reduction in the number of children in care. However, the proportion of children that have a completed Gateway assessment has increased slightly to 79 percent. Improving the Gateway process is an on-going area of focus, which is reflected in the overall positive trend we see over time.

More children in care have their full range of needs met

SERVICE REFERRALS

Referral to core health support

Oranga Tamariki has high rates of recommending vision, dental and hearing referrals, and numbers have improved further this quarter with an average of 85 percent of those with identified needs being referred. A decision to not recommend a referral could be associated with service gaps or the need already being met at the time of assessment.

SUPPORT TO RETURN AND REMAIN HOME

Entries and exits for out of home care

The June quarter saw entries into out of home care increase slightly by 3 percent. While there have been fluctuations in entries to out of home care over time, the use of these placements has generally been decreasing over the last two years. The number of exits from out of home care increased by 2 percent in the last quarter.

Children are better supported to remain and return home successfully

Terminology:

Out of home placement:

A child is in an out of home placement if they are not able to live in their family home. This can include:

Family/whānau Placement:

Family/whānau placements are an out of home placement where a child has been brought into the custody of the Chief Executive, and has been supported to remain living with a member of their whānau as their caregiver.

Non-Family/whānau Placement:

A non-family/whānau Oranga Tamariki approved carer provides care for children who are not part of their own whānau. This is in contrast to other carers, who typically work with NGOs to provide care through contracted service arrangements.

Other Placements:

Other out of home placements can include residences, family/group homes, and contracted NGO services arrangements among others.

Return/Remain placement:

A child is in a return/remain placement where they are in the legal custody of the Chief Executive but remain in the care of their immediate family. These placements are used most commonly where we are attempting to support the reunification of a family, while still maintaining legal custody to ensure the child remains safe.

Gateway Assessment:

The Gateway assessment is a formal needs assessment, covering health, education, and other needs of the child. Consent for a Gateway assessment must be obtained from a child's parent or guardian, or, depending on their age, from the young person themselves. After the completion of an assessment, Oranga Tamariki records whether a recommendation has been made for a child to be referred to receive a relevant service for the identified need.

This shows how well we are performing at keeping children and young people in the types of placement most like home. The shaded area represents the number of long-term active placements, by which we mean those that are at least three months old (i.e. excluding short term or newly initiated placements).

The blue shaded area represents our highest priority placement type, where a child is kept with their extended whānau.

The green shaded area represents the next best option where whānau is not possible, where a child is placed with an Oranga Tamariki non-family/whānau carer.

Finally, the grey shaded area represents where a child has been placed in another care arrangement for greater than three months, including with NGO providers or in residences.

This shows how well we are performing at keeping family/whānau placements stable. The bar shows the percentage of family/whānau placements which ended that quarter. It is important to note the scale - only a small minority of placements are unstable each quarter.

Of those, the green section shows where the placement was not able to be replaced with another family/whānau placement, and the child instead moved into a different type of out of home placement.

The blue section shows where the placement was able to be replaced by another family/whānau placement, and the child moved to another caregiver within their extended family.

It excludes placements that ended because the child was returned to their family, or aged out of the system.

This shows the degree to which we are maintaining an appropriate supply of care options for children entering out of home placements, including our matching and whakapapa searching capability.

The bar shows the children who entered out of home placement in that quarter. The blue section shows the percentage who were able to be immediately placed into family/whānau care.

The green section shows the next best option where whānau is not possible and the child is kept with an Oranga Tamariki non-family/whānau carer.

Finally, the grey portion shows those who were first placed in another arrangement, including with NGO providers or in residences.

This shows how we are performing at ensuring every child in the custody of the Chief Executive has received a gateway needs assessment.

The bar shows the number of children and young people who were in the custody of the Chief Executive at the end of that quarter. The blue section shows those with a completed gateway assessment on record. The green section shows those where we have referred to a gateway assessment but the results have not yet been received.

The grey section shows those where no referral has been recorded. Some children may not have a referral if they are on a specific order (e.g. a temporary placement), or if they have recently had an assessment and their doctor decides this sufficiently replaces a gateway needs assessment.

This shows how well we are performing at keeping children and young people in out of home placements with caregivers of their own ethnicity. The blue portion of the bar shows those where a child is placed with their family/whānau. The green section of the bar shows where a child is not with their family/whānau but there is an ethnicity match, and the grey where there is no ethnicity match.

Ethnicities are considered matched if there is any common ethnicity between the child and the caregiver - for example, if a child is both Māori and NZ European and one or both caregivers has Māori or NZ European ethnicity, then they will be considered matched.

It excludes return/remain home, bednights, independent living, and residence placements. It also excludes placements where we do not know the ethnicity of the caregiver, such as with NGO providers, or some Oranga Tamariki non-family/whānau carers.

This shows how we are performing at recommending a child is referred to the relevant services following the identification of a need in their gateway needs assessment. We report on three key areas representing foundational needs which are commonly identified; dental (blue), hearing (green), and vision (orange).

Each bar reflects the percentage of children in the custody of the CE who were recorded as having been recommended for a referral to a relevant service following identification of that need in their gateway assessment.

This excludes any children who had not had a gateway assessment (as by definition they have not been assessed as having one of those needs). [Note as part of service improvements underway, the way this is measured may change in the future.]

This is an indicator of how well we are performing in supporting children to remain at home with their families, or to return home successfully to their families following an out of home placement. The green line shows the number of children who entered an out of home placement in each quarter. This includes both children who had never before had an out of home placement, as well as children who had previously been in an out of home placement at any point in the past, i.e. who had previously been returned to their families but this has not proven to be sustainable.

The blue line shows the number of children who exited an out of home placement. This includes children who exited an out of home placement but remained in the custody of the Chief Executive in a return/remain home placement. It also includes children who left out of home placement and the custody of the Chief Executive each quarter. Most commonly these children are reunited with their families, but this also includes those who aged out of the system and those who moved to permanency arrangements.

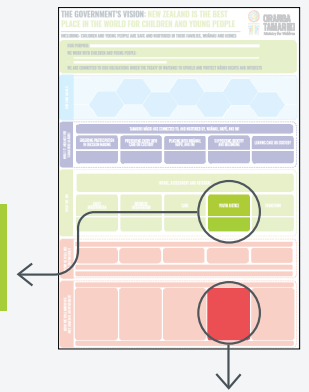

Importantly, this graph excludes entries to, and exits from, return/remain home placements where a child is still in the care of their immediate family. Note, the vast majority of total placements are out of home placements.

Quarterly Report

Youth Justice

Support me to find new pathways: Te Ara Hou, Te Ara Tika, Te Ara Oranga
We support young people, whānau and victims of youth crime to restore their mana their wellbeing

Note: COVID-19 may have impacted the June, September, and December 2020 quarters. This is due to the Alert Level restrictions first implemented at the end of March 2020.

SUPPORT FOLLOWING OFFENDING

Re-engagement for those with Youth Justice history

The proportion of young people referred to Oranga Tamariki Youth Justice once and not subsequently re-referred (blue section of bar) has been growing over the past two years to 47 percent. Meanwhile the proportion of young people referred multiple times and not subsequently re-referred (green section of bar) has been declining over the past two years to 28 percent. 76 percent of young people with a past Youth Justice referral had no contact with us this quarter.

More young people stop offending before adulthood

RE-OFFENDING

FGC history for young people with current FGC

The number of FGCs held overall has increased this quarter. The number of young people who had five or more FGCs reduced by 16 percent since the last quarter. Young people who have had between 1 and 4 FGCs in total made up the majority (80 percent) of all FGCs this quarter and the number of FGCs in this category increased 22 percent.

LESS RESTRICTIVE PLACEMENTS

Custodial placements in Youth Justice

The total number of community-based placements increased in the latest quarter and accounts for 24 percent of placements. The number of residence placements has remained stable over the last three quarters and the number in police custody has reduced significantly in the last quarter. The total number in custody in June 2021 is similar to the June quarter of the previous year, following a significant drop from March 2020.

**Note: work is underway to query the Police Custody figure as it does not align with other data sources*

More young people are safely managed in the least restrictive placement appropriate

SHORTER PLACEMENTS

Average days on custodial placements

Supervision with residence placements have the highest average length with 114 days - the length of these placements is strongly influenced by the sentence length given by the court. The average time spent in a residence on remand has increased slightly to 45 days. The average placement length in police custody has remained stable at 1.1 days and has reduced in community-based placements to 12 days.

INITIAL CASE DECISION

Status of cases after first court appearance

Shares of each initial case outcome type have fluctuated slightly over time. There has been a decrease in the proportion of cases initially placed on custodial remand then bail. For the vast majority of cases, young people are released on bail after their first court appearance. On average, around 390 court cases end each quarter.

Fewer young people are escalated within the justice system

ESCALATION OF BAIL

Final status after being bailed

The majority of young people who are released on bail remain on bail throughout the case. However around 25 percent to 30 percent are subsequently remanded in custody. The proportion that stayed on bail has been similar over time. Those who remain on bail with no offence make up 55 percent of all statuses for the quarter.

Terminology:

Youth Justice Family Group Conference (FGC):

Youth Justice FGCs give a young person - with their whānau, victims and professionals - a chance to help find solutions when they have offended. There are three types of Youth Justice FGCs: an FGC for children who offend, an Intention to Charge FGC, and a Court Ordered FGC.

Residence:

A youth justice residence provides a secure place for young people to stay who are in the custody of the Chief Executive following arrest, remand or sentence. Residences are locked facilities that provide 24 hour containment and care.

Community-based:

A young person in the custody of the Chief Executive can be detained in a community-based placement if their circumstances do not require them to be in secure residence. Community-based placements can include group remand homes or provider run homes.

Police Custody:

A young person can be held securely by the Police immediately following arrest or as a short-term remand by the courts. On occasion, a young person remanded in the custody of the Chief Executive may be detained in Police custody for up to 24 hours for reasons specified in s242(1)(b) of the Oranga Tamariki Act 1989.

Supervision:

Under a supervision order, a supervisor (generally an Oranga Tamariki Youth Justice social worker) monitors the young person's living, working and social situation.

Supervision with activity:

A supervision with activity order requires a young person to attend regular activities or programs set up by a supervisor for a period of up to six months. Supervision with activity programs aim to give young people pro-social experience and build positive relationships.

SwR Order:

Under a Supervision with Residence Order (SWR), the young person is placed in the custody of the Chief Executive, and has to live in a youth justice residence for the period ordered by the court. If the young person behaves well and does not abscond or commit any more offences, they may be released early.

Custodial Remand (Residence or Community-Based):

While a court case is progressing, a young person can be detained in the custody of the CE under s238(1)(d) of the Oranga Tamariki Act 1989. A young person can also be detained in the custody of the CE by the adult courts under Sections 173 to 175 of the Criminal Procedure Act 2011. The definition here has been expanded to also include detention in the CE's custody following arrest up to the first court appearance under s235 of the Oranga Tamariki Act 1989.

Custodial Remand (Bail/custody graphs only):

Includes remands under Sections 238(1)(c) to s238(1)(f) of the Oranga Tamariki Act 1989, as well as remands under Sections 173 to 175 of the Criminal Procedure Act 2011.

This graph is indicative of how well we are performing at keeping young people from re-offending following their first contact with Oranga Tamariki Youth Justice Services.

We have taken all those of eligible age in the quarter who have ever previously had a Youth Justice referral to us.

Of these young people, we look at the proportion who we have not engaged with in that quarter. This proportion is split by those who have never been engaged with us following their first referral, and those who have.

Young people engaged with us includes those young people who had an FGC, were on custodial remand, or received any of the following Youth Court orders: supervision, supervision with activity, or supervision with residence.

This shows how well we are performing at keeping young people from returning to Youth Justice for multiple FGCs. The bar shows the number of young people who had an FGC in the quarter, split by the total number of FGCs they have had.

The blue section shows the number of young people for whom it was their first FGC, the green section shows the number of young people who have had a total of 2-4 FGCs, the orange 5-9 FGCs, and the grey section 10+ FGCs.

This shows how we are working to ensure we are holding young people in custody for the shortest possible period of time appropriate to the circumstances of the case.

For placements that ended in the quarter, each bar reflects the average number of days young people were in custody. We report on four key placement types; community-based (blue), residence – on remand (light green), residence – on SWR order (dark green), and police custody (grey).

If a young person shifts from one placement type to another (e.g. from a community-based placement to a residence), the custody length has been recorded separately for the two different placement types.

This shows the court outcome immediately following a bail order, and whether further offending contributed to this outcome. Oranga Tamariki and partner organisations work to support young people to successfully complete their bail order.

The bar represents finalised cases where a young person was released on bail either after the first court appearance or following an initial custodial remand. The bar is split by whether the young people remained on bail through to the end of the case or whether they were subsequently remanded in custody. In both cases, information is further split by whether the young people offended while on bail.

The solid blue section shows the cases that remained on bail where no offence occurred, while the striped blue section shows where bail was maintained for the entirety of the case despite an offence occurring.

The solid green section shows the proportion of cases where no further offending occurred on bail but for other reasons the young people were subsequently remanded in custody. This would generally be due to breaches of bail conditions, but data on bail breaches is not readily available. The green striped section shows bail cases that later resulted in a custodial remand and an offence on bail occurred. Please note, offending on bail may be undercounted due to Police data recording issues for lower level offences.

This graph shows the total number of custodial placements in Youth Justice at any point during the quarter, according to type of placement.

The blue section shows the number of community-based placements during the quarter. The green section shows the number placements in a residence during the quarter. Finally, the grey portion shows the number of placements where a young person was detained in police custody.

If a young person has been in more than one type of placement during a quarter (residence, community-based placement and/or police custody), they have been included for each instance.

This shows the status of cases after the first court appearance as a share of all cases finalised in the quarter. For cases initially remanded in custody, figures have been split between cases that remained on custodial remand thereafter, and cases where the person was subsequently bailed.

The blue section shows the cases that resulted in a release into the community after the first court appearance (sometimes referred to as 'release at large'). The green section shows the cases with a release on bail after the first court appearance. The orange section shows the cases resulting in a custodial remand after the first court appearance and a later release on bail. Finally, the grey portion shows the number of cases that resulted in a custodial remand until the case was concluded.

Please note that the definition of "custodial remand" used in this data supplied by the Ministry of Justice differs to that used in earlier graphs based on Oranga Tamariki data (see Terminology section above). Also, due to overlapping proceedings still before the court, the count of 'finalised cases' is slightly overestimated in recent quarters. The average number of finalised cases each quarter is approximately 390.

Cases are defined as all charges with the same court start date or the same court end date. Due to this definition, in some instances a case may be prematurely counted as finalised in an earlier quarter due to some, but not all of the charges within the case being resolved. Once all charges in the case are resolved, the case is correctly attributed to the later appropriate quarter. This is most noticeable in the initial custodial remand cases where the proportion could be overestimated by as much as 3 per cent in the latest quarter but will become more accurate after time has passed and the finalised cases are attributed to the appropriate quarter.
